SUMMARY :

- I studied the Take-Home-Test document provided by you, and i realized that the project's base requirements are ASP.NET MVC & MS SQL, which was a positive thing for me. However , WEB API technology is not yet studied by me, also i did not mention this technology in my CV.
- So instead of saying a straight NO, i decided to do research on it , so i studied about Web API's , specially Twitter API and concluded that this project can be completed using TweetSharp tool. But as i started its implementation, i realized that without a To-The-Point guidance, i will end up missing some random .dll file or some reference, and will not be able to use this WEB-API technology at this point.
- Anyhow , i decided to make a project using the skills i have, so that i could show an example of my OOP concepts and my base of MVC ASP.NET framework. I used different technologies like JQuery, DataTables, Razor Engine etc. The whole list of technologies which i have knowledge about, is in my CV.

SOFTWARE :

- Visual Studio 12
